Integration Risk	Risk limited evidence	Risk limited evidence	Pass ▲ limited evidence	Pass ▲ strong evidence

WHY THESE WERE SUGGESTED

make

make is a reasonable substitute but carries elevated risk due to worse Vendor Stability (Risk vs Canva's Pass), and it shares the same Integration Risk (Risk) which is critical given your need to connect to warehouse management and supplier ordering APIs.

retool

retool is a strong substitute because it improves on Integration Risk (Pass vs Canva's Risk), which directly addresses your need to connect to warehouse management and supplier ordering APIs, while matching Canva on all other dimensions.

appsmith

appsmith offers better Integration Risk (Pass vs Canva's Risk) but is worse on Data Handling Posture (Risk vs Pass) and Vendor Stability (Risk vs Pass), which are important for your compliance and long-term reliability needs.
